(2) The Company did not have any assets or liabilities categorized within Level 3 of the fair value hierarchy on a recurring basis as of September 30, 2020.

(3) The Company did not have any assets or liabilities transferred into or out of Level 3 for the first nine months of 2020.

(4) Valuation techniques and inputs used in the fair value measurement for assets and liabilities.

Assets and liabilities recorded at fair value are disclosed using a three-level hierarchy. The classification of assets and liabilities within the hierarchy is based on whether the inputs to the valuation methodology used for measurement are observable or unobservable. Observable inputs reflect market-derived or market-based information obtained from independent sources while unobservable inputs reflect the Company's estimates about market data.

The fair value hierarchy prioritizes the inputs to valuation techniques used to measure fair value into three broad levels: Level 1 inputs are based upon quoted prices in active markets for identical assets or liabilities that the Company can access at the measurement date. Level 2 inputs are based upon quoted prices for similar instruments in active markets, quoted prices for identical or similar instruments in markets that are not active and model-based valuation techniques for which all significant assumptions are observable in the market. Level 3 inputs are generated from model-based techniques that use significant assumptions not observable in the market. These unobservable assumptions reflect the Company's estimates of assumptions that market participants would use in pricing the asset or liability.

There are three types of valuation techniques used to measure assets and liabilities recorded at fair value:

- The market approach uses prices or other relevant information generated by market transactions involving identical or comparable assets or liabilities.
- The income approach uses the present value of cash flows or earnings.
- The cost approach, which uses replacement costs more readily adaptable for valuing physical assets.

The Company uses both the market and income approach in its fair value measurements. These measurements are discussed in more detail below.

Fixed Maturity Securities

Fixed maturity securities were comprised of the following bond classes:

- U.S. government.
- U.S. political subdivisions.
- U.S. special revenues.
- Industrial and miscellaneous (unaffiliated).

The fixed maturity securities were diversified across industries, issuers, and maturities. The Company calculates fair values for all fixed maturity securities using valuation techniques described below. They are placed into three levels depending on the valuation technique used to determine the fair value of the fixed maturity securities.

The Company uses independent pricing services to assist management in determining the fair value of these assets. The pricing services incorporate a variety of information observable in the market in its valuation techniques, including:

- Reported trading prices.
- Benchmark yields.
- Broker-dealer quotes.
- Benchmark securities.
- Bids and offers.
- Credit ratings.
- Relative credit information.
- Other reference data.

The pricing services also take into account perceived market movements and sector news, as well as a fixed maturity security's terms and conditions, including any features specific to that issue that may influence risk, and thus marketability. Depending on the security, the priority of the use of observable market inputs may change as some observable market inputs may not be relevant or additional inputs may be necessary.

The pricing services provide quoted market prices when available. Quoted prices are not always available due to fixed maturity security market inactivity. The pricing services obtain a broker quote when sufficient information, such as security structure or other market information, is not available to produce a valuation. Valuations and quotes obtained from third-party commercial pricing services are non-binding and do not represent quotes on which one may execute the disposition of the assets.

The significant unobservable inputs used in the fair value measurement of the reporting entity's fixed maturity securities are valuations and quotes received from analytical reviews and broker quotes. Significant increases or decreases in any of those inputs in isolation would result in a significantly lower or higher fair value measurement.

The Company performs control procedures over the external valuations at least quarterly through a combination of procedures that include an evaluation of methodologies used by the pricing services, analytical reviews, back testing of sales activity and maintenance of a securities watch list. As necessary, the Company compares prices received from the pricing services to prices independently estimated by the Company utilizing discounted cash flow models or through performing independent valuations of inputs and assumptions similar to those used by the pricing service in order to ensure prices represent a reasonable estimate of fair value. Although the Company does identify differences from time to time as a result of these validation procedures, the Company did not make any significant adjustments as of September 30, 2020 or December 31, 2019.

Commercial Mortgage Loans

For disclosure purposes, the fair values of commercial mortgage loans were estimated using a discounted cash flow valuation. The valuation includes both observable market inputs and estimated model parameters.

Significant observable inputs to the valuation include:

- Pricing for loans originated by StanCorp Mortgage Investors during the most recent quarter.
- U.S. Government treasury yields.
- The contractual terms of nearly every mortgage subject to valuation.

Significant estimated parameters include:

- The use of risk characteristics including stabilized debt coverage ratio and loan-to-value ratio.
- Variations in valuation spread between loans based on individual risk characteristics.

Valuations for commercial mortgage loans measured at fair value on a nonrecurring basis using significant unobservable Level 3 inputs are sensitive to a number of variables but are most sensitive to net operating income and the applied capitalization rate. Generally, an increase or decrease resulting from a change in the stabilized net operating income from the collateralized property would result in a directionally similar change in the fair value of the asset. An increase or decrease in the assumption for the capitalization rate would result in a directionally opposite change in the fair value of the asset.

(5) The Company did not have any derivative assets or liabilities as of September 30, 2020.

B. The Company does not provide additional fair value information in the notes.
